To run Zoluto

After unzipping the file zoluto #. Zip (where # is the version number of the program), you should save the folder and its contents in an appropriate place in your computer and create a shortcut file zoluto #. Jar to be run from the desktop. Run directly (double clickc the left mouse button) the "file zoluto #. Jar" (or shortcut), this should be enough to run the program. If the program does not start and / or open a folder with the contents of the program code, two things may be happening:

1) - You do NOT have java installed on your computer. Follow the instructions below:To run this program properly, you must have installed Java SE Runtime Environment (JRE) on your computer. In most cases this program is already installed. Otherwise, it can be downloaded from the official website of ORACLE.

http://www.oracle.com/

or

http://www.oracle.com/technetwork/java/javase/downloads/jre-7u3-download-1501631.html

Follow the instructions for your operating system. After installation is complete re-try starting the application.

2)-IF java is installed on your computer but the ". JAR" is not associated with it.In most systems this is solved by clicking the right mouse button and selecting "Open With", it will display a list of possible applications to open this file.

You must select: Java (TM) Platform binari (for windows) or Sun Java Runtime (for Linux-Ubuntu)

Select the appropriate program and check the box that tells the system that time onwards always use this program to open this kind of files If these programs are not listed, select "Search".

For Windows computers the program should be stored in the folder "Program Files"
